Project Title

DevOps-Driven Learning Management System (LMS)

Deliverables / Tasks

1. Develop a professional, responsive full-stack web application
2. Implement secure user authentication and role-based authorisation for students and instructors
3. Design and integrate a database for users, courses, lessons, and completion status
4. Build an interactive dashboard for student progress tracking and course management
5. Use Git and GitHub for structured version control with branch strategy
6. Apply Agile/Scrum development practices across multiple sprints
7. Containerise the application using Docker and docker-compose
8. Implement an automated CI/CD pipeline using GitHub Actions
9. Deploy the live application using Render cloud platform
10. Produce complete software process lifecycle documentation
